

Managing Tax Compliance Today

In today's evolving tax environment, ensuring timely and accurate tax compliance has become increasingly challenging for organizations. Frequent regulatory changes, enhanced data scrutiny, and multiple reporting requirements have significantly increased compliance complexity.

With the Government's growing focus on **transaction-level data analytics and reconciliations**, businesses are often required to respond swiftly to discrepancies. Fragmented processes, manual interventions, and limited visibility can make compliance management inefficient and risk-prone.

Technology-Enabled Tax Compliance

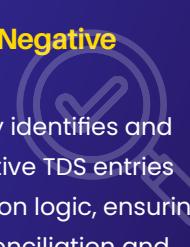

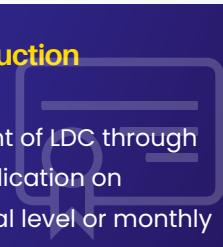

TAXCPC is a modular, technology-enabled tax compliance tool that supports organizations in managing critical tax compliance processes with greater accuracy, efficiency, and control.

The tool streamlines multiple layers of the tax compliance lifecycle—from structured data validation and compliance processing to monitoring and reporting—helping businesses stay compliant in an increasingly data-driven regulatory environment.

TAXCPC accepts tax data in its **existing ERP or source format** and applies intelligent, rule-based checks to **deliver accurate, timely, and compliance-ready outputs**, tailored to organizational requirements.

Tax Compliance Technology

TAXCPC - Key Features (TDS Compliance Tool - Key Capabilities)

<p>Automated Compliance Processing</p>  <p>Import bulk TDS data into TaxCPC with automated PAN and PAN-Aadhaar validation to reduce errors, ensure accuracy, and prevent compliance risks.</p>	<p>Handling of Negative TDS Data</p>  <p>Automatically identifies and adjusts negative TDS entries using validation logic, ensuring accurate reconciliation and preventing reporting mismatches or compliance issues.</p>	<p>Compliance Risk Indicator</p>  <p>Pre-processing of TDS data so that all defaults can be identified before challan remittance like Short deduction, PAN errors, LDC limit validation, etc.</p>
